SUMMARY

I'm a responsible individual eager to gain my first work experience. I'm excited to learn, grow, and contribute positively in a professional environment. I'm looking forward to applying my skills and making a meaningful impact while contributing to a dynamic team as a software engineer.

EDUCATION

B.E. Electronics and Communication Engineering Bannari Amman Institute of Technology, Sathyamangalam CGPA: 7.48	Nov 2022 – Mar 2026
Higher Secondary Certificate International Community School & Junior College, Kotagiri Percentage: 66.7%	Jun 2021 – May 2022
Secondary School Leaving Certificate St. Thomas English High School, Gudalur Percentage: 73%	Jun 2019 – May 2020

SKILLS

Languages & Frameworks: Java, Python, ReactJS, HTML, CSS, C
Databases: PostgreSQL
AI / ML: Basics of RAG and Agentic AI
Other: Data Structures and Algorithms, Postman

PROJECTS

AI Student Dropout Copilot

An AI-powered web platform that helps faculty identify and support at-risk students before they drop out. The faculty dashboard surfaces per-student dropout risk scores, triggers real-time alerts, and enables direct intervention — turning raw academic data into actionable early warnings.

- Rolled out to real faculty users, helping them spot struggling students much earlier than before — what used to take days of manual follow-up now surfaces as an instant alert, giving educators a genuine head start on stepping in.
- Gave teachers one clear place to see who needs help and actually do something about it, replacing the usual mess of spreadsheets and guesswork with a straightforward AI-driven workflow that keeps students from falling through the cracks.

Academic Lab Slot Booking

A simple web application for lab slot booking for students and teachers.

- Created a web app to facilitate lab slot booking for students and teachers using React and MySQL.
- Enabled users to book, cancel, or check slots, and provided admin features for managing bookings.

NL to SQL to NL

Natural Language to SQL and Back using MCP (Model Context Protocol) — an intelligent system that converts natural language queries into SQL commands and translates SQL outputs back to human-readable text.

- Integrated PostgreSQL for dynamic query execution with real-time SSE communication.
- Deployed the backend on Render and the frontend on Vercel, enabling seamless interaction between the LLM and database.

INTERNSHIPS

Artificial Intelligence and Machine Learning

Covered basics of ML, CSV file reading and visualizing, classification and clustering using libraries such as Matplotlib, Pyplot, and Scikit-learn. Built a basic house price prediction model.

LANGUAGES

English (Fluent), Tamil (Native), Malayalam (Conversational)
